Watertight wireless distant screen

Watertight, Wifi, light, low power consumption

This wireless distant screen has a 12 inch screen, it is controlled with a joystick which allows direct control over PC based data. It can be viewed even in bright sunlight.

Data from an onboard computer is displayed and controlled over WiFi (within 20 mtrs./ 65ft. clear range), the touch screen can fully control a PC installed inside the cabin. It allows true two-way communication with the onboard computer.

The unit is designed to operate in a maritime environment, completely watertight (IP67) and insensitive to UV. The white case protects it from the solar thermal radiation.

Its screen full sun is regulated in luminosity and contrast for a vision of day like night. The contrast of the screen can be adjusted for daylight vision, the backlight can be adjusted to different levels for nighttime vision.

Characteristics
