A safe world tour for Awen, equipped with the remote control nke.

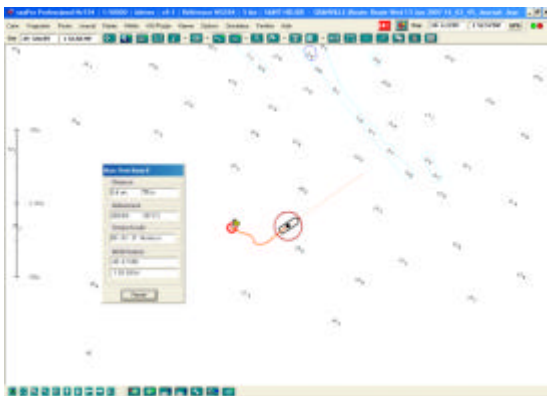

MAN OVER BOARD DETECTION

nke AND SEAPRO CHOSE TO WORK TOGETHER TO PROVIDE YOU WITH A PERFECT SAFETY

The Emergency MOB nke is a reliable and autonomous system used a lot in the sailing world, also by professionals.

This product, of really easy use, is perfect for reduced crews who want to sail serenely. It is composed of one transmitter which constantly sends an identification code to a receiver to ensure the permanent surveillance of the crew members. In case of Man Over Board, the receiver does not get the signal of the transmitter and a very powerful signal is emitted, which warns the other crew members. This product is entirely independent : you just have to connect it to a 12 volts alimentation.

Today, it is possible to connect the receiver to a computer equipped with the software **Navicarte SeaPro**. This allows you to know the Man Over Board position with the bearing and distance. So that, you have more chance to find the Man Over Board.

Navigation page of the Seapro Software with the indications of bearing and distance to reach the Man Over Board.

Emergency MOB

(1 Receiver + 1 Transmitter + 1 aerial):
